

Challenge 2

Deliver AI with Less Compute

Challenge Description

How can you deliver high-quality AI results while using fewer resources? As AI becomes more widely used, organizations are looking for ways to reduce the cost and computing power needed to run AI applications without sacrificing speed or accuracy. In this challenge, participants will design and build a solution that completes AI-powered tasks as efficiently as possible. Teams can explore different AI models, simplify prompts, reduce unnecessary processing, or introduce ways to check results without adding excessive overhead. Participants are free to choose their own tools, models, and technical approaches.

What your solution may solve
